

ENGINEERING[™]
innovation
The postage savings solutions company.

Ell's parcel solutions include the revolutionary **EZ-WorkDesk** and **EZ-Parcels** systems which rapidly process parcels for induction and routing. **EZ-WorkDesk** provides quick parcel induction capabilities with the lowest initial investment, **EZ-Parcels** adds greater automation, speed and versatile routing with package diverter sections. Both parcel solutions products can capture data from the face of the package, capture weight and dimensions, and apply a shipping label.

In line with EII's commitment to provide the mailing industry with cost effective solutions for maximizing postage savings, these systems open up new savings/revenue opportunities for fulfillment, consolidators, returns package processing, mailers, and shippers. All equipment includes options for Wide Area Barcode Reader, UMove Move Update processes, processing International Mail, and processing Inbound Mail.

EII combines more than 30 years of mailroom experience with over 20 years of postal automation design experience to develop solutions that work for mailers of all sizes. EII's mission is to develop practical products that work in the real-world and to provide service after the sale that is second to none.
